Household Pressure Systems

Davey are the benchmark for quality and reliability with market leading features.

Davey offers you a vast choice of pressure systems operated by our unique Torrium2 controller to deliver you flawless performance no matter what the demand. There is a Davey Home Pressure System to suit virtually every home and budget.

Choosing the most appropriate model for your application depends on a number of factors:

- **How much water will be required?**

This is often considered in terms of the number of taps or outlets that are likely to be on at the same time.

- **How much pressure will be needed?**

Pumping through long runs of piping or to elevated places such as multi-storey buildings requires more pressure than flat sites or compact plumbing systems.

The following chart is a quick guide to selecting a Davey Home Pressure System to suit your flow and pressure requirements.

Household Pressure Systems Selection Guide

GUARANTEE
2 Years

HP45-05T

Davey HP with Torrium2

Whisper quiet operation. Strong even pressure, whether it's one shower or multiple outlets at once. Designed for average to large size and single storey homes.

Tested in compliance with
AS/NZS 4020 
for use in contact with safe drinking water

 GUARANTEE
2 Years

HS60-08T

Davey HS with Torrium2

Low power consumption and noise output. High pressure output to suit multi-storey homes or where the pump may be some distance from the dwelling.

Tested in compliance with
AS/NZS 4020 
for use in contact with safe drinking water

 GUARANTEE
2 Years

**NOW
AVAILABLE
WITH PLUG
& PLAY**

Torrium2 Controller

Torrium2 is an intelligent controller designed to supply pressure boosted water with constant flow and even water pressure to domestic households. It incorporates several levels of pump protection.

Tested in compliance with
AS/NZS 4020 
for use in contact with safe drinking water

 GUARANTEE
2 Years

HM160-15T

Davey HM with Torrium2

All stainless steel high pressure system for large multi-level dwellings. Pressure tanks can be added if site conditions require additional draw off.

Tested in compliance with
AS/NZS 4020 
for use in contact with safe drinking water

 GUARANTEE
2 Years

XJ50T

Davey XP and XJ with Torrium2

Jet assisted centrifugal pressure system. Designed for smaller systems or larger systems with long suction lines or suction lift requirements.

Tested in compliance with
AS/NZS 4020 
for use in contact with safe drinking water

Constant Flow and Even Water Pressure

To prevent annoying fluctuations in water temperature during showers, Torrium2 uses its intelligence to provide households with constant flow to give even water pressure.

Quick Cut-in for Even Pressure

To give you strong pressure right from the start, Torrium2 is designed to cut in quickly when it senses demand for water. It cuts in when the pressure has dropped to 80% of the previous top (shut-off) pressure.

Greater Hydraulic Performance

For better hydraulic performance to supply more pressure with less wasted energy, Torrium2 has been designed with larger water pathways and no moving parts in the pathways. This performance versus loss equation is especially evident at higher flow rates.

Dry Run Protection

To protect the pump from damage due to dry running, Torrium2 stops the pump when it detects a loss of prime (no water supply) situation.

Auto Retry

Auto-retry in Torrium2 allows the system to reset itself after a loss of prime, thus helping reduce system downtime.

Adaptive Starting

Torrium2 is clever enough to detect the difference between normal water demand and a small leak in the system, such as a dripping faucet or a leaking cistern. For very low flows, Torrium2 automatically adapts to reduce the cut-in pressure, which can be as low as 50% of its last shut-off pressure.

Torrium2 is available complete as part of a Davey Home Pressure System or can be purchased separately to upgrade an existing pump.

SilverSeries

SJ35-04, SJ35-04PC & SJ60 - 08PC

The SJ35-04 pump models can supply a variety of garden watering applications, such as :-

- > A garden hose with a spray nozzle fitted, or
- > A garden spray system with up to 25 microjet sprays, or
- > A garden dripper system with up to 200 garden drippers (4 litre per hour drippers), or
- > Two small impact sprinklers

SJ35-04PC & SJ60-08PC

These are automatic models, suitable for connection permanently to a power supply and will start according to demand and stop according to flow demands. These models have anti-cycling controls; it is less likely to stop and start under low flow conditions. These models have both closed head protection (will stop on low or no flow) as well as loss of prime protection.

- > Low flow shut-down
- > 'No water' protection
- > Automatic

Tested in compliance with
AS/NZS 4020
for use in contact with safe drinking water

GUARANTEE
2 Years

Davey Dynajet

- Ideal for average to large sized, single and double storey homes
- Pressure switch operated with various tank options available
- Also great for domestic irrigation applications

GUARANTEE
2 Years

Davey Speedman Compact

- Variable speed constant pressure system
- Energy saving and compact
- Supplied with an 8P pressure tank

Tested in compliance with

AS/NZS 4020
for use in contact with safe drinking water

AS/NZS4020 Certification

Davey's water pressure systems pumps (HP, HS, HM XJ, XP & VM) including Torrium2 have all been certified as AS/NZS4020 compliant.

The AS/NZS4020 Standard stipulates that products in contact with drinking water do not affect the taste or appearance of the water; do not support the growth of micro-organisms and do not release cytotoxic or mutagenic compounds or metals into the water.

Supercell Pressure Tanks

Davey Supercell Pressure Tanks are designed to provide many years of reliable service. These robust, hydro-pneumatic water pressure vessels are manufactured from the highest quality materials in compliance with the strict requirements of ISO 9001:2000 quality standards. The range includes high pressure models with replaceable diaphragms and composite tanks that are more durable in coastal or high humidity environments.

RainBank is an automatic controller for rainwater harvesting. RainBank controls the water supply for toilet and laundry applications by automatically selecting the water source with rainwater being the priority and mains water the back-up.

RainBank can save up to 40 per cent of a household's drinking quality water which is normally used in these applications, helping conserve precious water reserves.

RainBank is available as a kit with a range of dependable Davey pumps to suit a wide range of homes and applications. 'S' kits have submersible pumps that are ideal for running in the tank to eliminate noise.

KRBCAB1F

NEW!

Floatless RainBank model now available for surface mounted applications.

HYDRAULIC PERFORMANCE

RainBank Kit Performance Curves

RainBankPRO

The complete interconnection system for larger installations, such as schools, apartment buildings, warehouses, factories, motels, police stations, council buildings and fast food outlets. Includes controller, VM multistage pump, flow switch isolation valves, 24 litre high pressure Supercell tank and stainless steel manifold, all mounted on a stainless steel base.

Also available as a Variable Speed Option and Multiple Pump Option on a made to order basis.

Aquashield

Pressure Boosting and Treatment Packages

Davey's AquashieldMAX packaged systems provide pressure boosting and control, filtration and disinfection via Davey's proven three stage process, all in one factory assembled and tested package. Ideal for B&Bs, schools, restaurants, farms and homes.

Proven 3 Stage Treatment Process:

- Automatic treatment of rain, bore and surface water
- Ready to install packages in weatherproof enclosures
- Factory matched and tested systems
- Flows up to 70 lpm
- 20 micron and 1 micron high capacity cartridge filters
- Includes gauge set and stop valves.

Steriflo and Filterpure Kits

- Includes UV chamber and two stage filtration and housings. Optional pump lead included
- Supplied as individual components for installation flexibility
- Whole house systems offered in 50, 70 and 130 lpm options for medium to large homes and light commercial applications
- Lamp Replacements - Life of 9,000 hours, replace every 12 months

 GUARANTEE
1 Year

Davey Steriflo

- Davey Steriflo is an economical means of managing bacteria and virus in drinking water supplies
- Davey recommend installing prefiltration to ensure the highest penetration of UV light
- A large range of models are available to suit most applications

 GUARANTEE
1 Year

Aquashield Centurion UV System

- Proven three stage treatment process for rain tank water supplies with flows up to 70 lpm
- Preassembled wall mount unit including two stage Filterpure prefiltration down to 1 micron, followed by Davey Steriflo UV
- Flexibility to install with an existing pump or to a Davey home water pressure system
- Water flow left to right or right to left, for installation flexibility
- Provides 30mj/cm³ at 90% or above UV Transmission (UVT)

 GUARANTEE
1 Year

Davey Steriflo – High Flow

- Designed for economical disinfection of water for large scale water treatment such as farm washdown, irrigation and non-validated potable water supplies
- Supplied standard with an electropolished 316 stainless steel chamber, UV sensor and amalgam lamps
- Features a programmable LED display control panel with plug and play connections
- Web based remote access is available as an option on some models
- Flows up to 275 m³/hr

Water Filtration & Purification

Filterpure Industrial Housings

- Constructed from 304SS, these industrial filters are durable and with their '7 around' design offers greater flow rates at reduced pressure loss
- Handling operating pressures up to 1000kPa these filters can be used in a wide range of applications
- Housing and filters sold separately
- Bag filters also available

Acquasafe

- An environmentally safe, tasteless and odourless formula used for tankwater disinfection, lasting for up to 2 months
- Destroys virtually all bacteria and viruses and is non-toxic, breaking down into oxygen and water
- The key ingredient in Acquasafe is Sanosil, exclusively supplied to Davey for tankwater disinfection
- Regular monitoring with Acquasafe test strips is essential to ensure your tankwater remains safe

Water Softeners

- Hard water is naturally occurring and contains excess levels of dissolved minerals such as calcium, magnesium, manganese and iron resulting in scale buildup
- Davey Kinetico Water Softeners are an easy solution, offering an uninterrupted supply of soft water to the home using their non-electric, twin tank system
- Using less salt than traditional electric timer systems, it uses soft water to regenerate only when the water demand has been met, not at a set time or day
- Model selection is based on a water test and the total daily demand required. Contact customer support for further information

Units supplied with number 4 metering disc. New Sumoll model does not require metering discs.

| Type | Description | Max Iron (Ferrous) | Max. Hardness | Peak/Service Flow | Connections | Salt Included |
|-------------------|--|--------------------|---------------|-------------------|-------------|----------------------|
| KSUMO2 NEW | Single tank water softener | 0 mg/l | 850mg/l | 45/35lpm | 20mm BSPM | 9 x 1.8kg block salt |
| KM2020CHF | Twin tank water softener – includes 20 micron prefilter and by-pass valve. (not suitable for iron removal) | 0 mg/l | 342mg/l | 51/32 lpm | 25mm | 9 x 1.8kg block salt |
| KM2025S | Water softener for medium water hardness – includes 20 micron prefilter and by-pass valve | 2 mg/l | 428mg/l | 45/30 lpm | 25mm | 1 x 25kg |
| KM2060S | Water softener for high water hardness – includes 20 micron prefilter and by-pass valve | 6 mg/l | 1129mg/l | 68 / 44 lpm | 32mm | 5 x 25kg |
| KM2060SOD | High flow water softener for medium water hardness – includes 20 micron prefilter and by-pass valve | 6 mg/l | 513mg/l | 114 / 78 lpm | 32mm | 5 x 25kg |

Questions to ask:

1. Has a chemical water test been obtained?
2. What is the peak and daily water demand?
3. What is the water source?
4. What will the water be used for?

Davey ClearFlow – Capacitive Deionisation system

- Capable of removing salts and other charged molecules from brackish water supplies including bores, wells and ground water
- Creates acceptable water quality for domestic use or for use with crop irrigation and livestock
- Offers an easy and more cost effective method for water treatment when compared to water softeners or small to medium sized reverse osmosis systems without the need for complicated chemicals or controls
- Generates a 75 – 95% reduction of salts, hardness iron and even aerobic bacteria from incoming supplies
- Production output of 800 – 4000 L/day per unit
- ClearFlow is modular system that added and combined to reach required production
- ClearFlow custom range is capable of up to 72,000 L/day

| PART NO. | MODELS | MAX INPUT CONDUCTIVITY (µS/cm) | SALT REMOVAL | TREATED WATER OUTPUT LITRES PER DAY | AEROBIC BACTERIA REMOVAL |

Shallow Well Jet Pumps

For suction depths to 7.5 metres

Davey's shallow well jet pumps, complete with a pressure switch or Torrium2 controller, can draw water from rivers, creeks, dams and shallow bores down to 7.5 metres for farm water supply, stock-watering, small scale irrigation, garden sprinklers, washdown and tank filling.

These shallow well jet pumps are simple to use and highly durable. Plus, installation and servicing are easier as the pump is conveniently installed at ground level.

The 95S, 125S and 165S model's casing is constructed of high grade aluminium with a Rilsan lining to ensure extremely high corrosion and abrasion resistance for trouble free operation.

They also feature a Davey designed IP56, TEFC (Totally Enclosed Fan Cooled) motor which can handle an ambient temperature of 50°C and help exclude dust, water and vermin.

Top of the range is the powerful and rugged Prime Jet 240 pump which is capable of delivering flows up to 240lpm, or developing discharge pressures in excess of 66 metres.

Davey Shallow Well with Torrium2

- Ideal for farm water supplies with varying water quality
- A combination of high pressure and constant flow
- High pressure models recently added to the range

Shallow Well Jet Pumps

- Rugged single stage jet assisted pump fitted with pressure switch
- Suitable for drawing water from depths up to 7.5 metres
- Versatile with venturi options available to adjust to required duty

Important Information

* Denotes standard configuration. Models 95S, 125S & 165S may be converted to higher pressure by fitting relevant Jet & Venturi
Specify Jet Kit No. when ordering Prime Jet 240

- Plumbing Connections: Inlet – 1½" (38 mm) BSPP Female. Outlet – 1¼" (32mm) BSPP Female – all models
- Pumps are supplied with pressure switches connected, suitable for automatic pressure system operation
- To convert litres/minute to gallons/hour multiply by 13.2. All imperial data is an approximation of metric figures
Specifications subject to change without notice
- All single phase models supplied with plug and lead for 220/250 volt 50Hz operation. Prime Jet 240 only may be re-connected for use on nominal 480 volt 50Hz single phase supply. For 3 phase nominal 415 volt, specify when ordering (available for 165S and Prime Jet 240 only)

Deep Well Jet Pumps

For suction depths to 50 metres.

Davey's quality deep well jet pumps, complete with a pressure switch, are ideal for handling suction lifts beyond 7.5 metres.

By submerging the jet and venturi down the bore, the Davey's deep well jet pumps can draw water from as deep as 50 metres. They are also ideal for applications where the pump needs to be horizontally offset from the water supply and thus requires a long suction pipe.

Same as the shallow well pumps, Davey's deep well jet pumps come with aluminium casing with Rilsan lining, IP56, TEFC motor designed to give years of trouble free operation.

Top of the range Prime Jet 240 model is capable of retrieving water from depths of 50 metres and can produce flows up to 194 lpm from shallower depths.

Important Information

- Pump outlet: 1 1/4" (32 mm) BSPP Female. 'Automatic Demand Response' valve fitted as standard on all models
- Suction pipe sizes: 1 1/2" and 1 1/4" I.D imperial poly pipe for injector kit nos 22469 – 22475 and 22427 – 22428. 2" and 1 1/2" I.D Imperial poly pipe for injector kit nos 22570 – 22573 and 22566 – 22569. 2" and 1 1/4" I.D Imperial poly pipe for injector kit no. 22468
- Max. shut-off pressures are at shallowest depth to water for each injector. Reduce by 10kPa for every 1 metre of extra depth to water
- All performances are with injector submergence of 3m and minimum pipe length of 12m
- All pipe fittings and hose clips are included with deep well injectors
- For offset applications, performance will be reduced if suction pipe lengths exceed depths indicated for borehole installations
- Consult your Davey dealer for recommendations on pipe sizes
- Pumps are supplied with pressure switches connected, suitable for automatic pressure system operation in conjunction with Davey Supercell tanks
- To convert litres/min to gallons/hour multiply by 13.2. All imperial data is an approximation of metric figures. Specifications subject to change without notice
- All single phase models supplied with plug and lead for 10amp (Prime Jet 240, 15amp) 220/250 volt 50Hz operation. Prime Jet 240 only may be re-connected for use on nominal 480 volt 50Hz single phase supply
- 3 phase 415 volt available in models 165D and Prime Jet 240 only – specify when ordering

Washdown & Small Irrigation

XF192

XF Series

The XF Series pumps offer high efficiency and longer operating life. Stainless steel pump shaft, corrosion resistant polycarbonate impellers and IP55 TEFC Motors.

Applications include; general water transfer, desalinated water, dairy cooling towers, hydroponic systems, spearpoints, water circulation, aquaculture applications.

Special XF171S and XF192S models are ideal for pumping sea water or water with dissolved solids. They incorporate silicon carbide seals and thermal protection, which automatically stops the pump if the water temperature in the pump casing exceeds 85°.

XF171D is especially designed for dog spas and is capable of successfully pumping aromatic hydrocarbons common in many animal wash products.

X201

Dynaprime X201 Self Priming Pump

Manufactured from corrosion resistant materials and featuring a 0.63kW IP55 TEFC motor, this versatile pump suits a variety of applications. With an 'open' impeller – giving it the ability to handle soft solids to 10mm and self prime down to 7m – the X201 is ideal for sump emptying, septic effluent disposal and water supply from spearpoints.

Motor kW input – (P1) 0.92

Motor kW output – (P2) 0.63

HP45-05

HP Series

The HP45-05 offers outstanding pump performance and extra quiet operation all packed in a compact, easily installed package.

CY70

CY70 Series

Robust and compact, single-stage all stainless steel centrifugal pumps, driven by a TEFC motor. Designed for total head duties to 36m and flows to 215lpm. Able to handle hot water up to 80°C for vat cleaning.

6200 / 6210

6220 / 6230

Dynaflo 6000 & SS Series

Designed for medium flow applications, Davey Dynaflo pumps are ideal for such applications as dairy washdown, spearpoints, small irrigation systems and general water transfer.

Manufactured to the highest standards, Davey Dynaflo pumps provide high capacity, efficient and reliable water supply for applications which demand flows up to 457 litres/min, or heads up to 41metres.

Dynaflo models are built to last and come complete with performance matched IP56 TEFC (Totally Enclosed Fan Cooled) Davey motors. Davey 6200 and 6210 Dynaflo pumps utilise a highly corrosion resistant Noryl pump body. 6220 and 6230 Dynaflo models utilise the strength of cast iron to handle even higher pressure duties, with a special internal and external powdercoat finish for added corrosion protection.

The Dynaflo 6220 and 6230 models are also available with extra heavy duty cast 316 stainless steel casings and hard faced silicon carbide mechanical seals. These pumps, with suffix "SS", are ideal for brackish or sea water, offering the same dependable performance as the standard models, but with the added surety of high grade stainless steel casings and hard wearing seals. The Dynaflo SS range is excellent for applications in Aquaculture, Marine, Hydroponics, etc.

6200 available in single phase only, 6210/6220 available in single phase or 3 phase, 6230 available in 3 phase only.

Effluent Pumps

Davey Effluent pumps are single stage open vane, semi vortex self priming centrifugal pumps driven by single or three phase TEFC motors. They are ideal for pumping effluent water or water containing soft solids in suspension, such as dairy or piggery waste, liquid food transfer and general water transfer.

25301 / 25303

 MM07/3
MM09/3

Mukmova

- Thick section cast iron pump body
- Fast self priming capability
- Can be made automatic with float switch
- Large inspection port with quick release toggles
- Shims fitted on inspection port for optimising pump performance in 25301 and 25303 models
- Can be installed outside pit
- Totally enclosed fan cooled motor
- 25301 is available with single phase (240/480V) while all other models are three phase (415V)

 HM Series with
TEFC Motor

 HM Series with
Pressure Switch

 HM Series with
Torrium2

HM Series

The Davey HM Series range of all Stainless Steel Horizontal Multistage Pumps features TEFC IP54 rated motors. These premium quality pumps are designed to give high performance and long operating life.

The HM Series pumps are able to handle liquid temperatures from -15°C to 105°C. This range is ideal for high head water transfer, irrigation systems, beverage and food industries, dairy vat washing and fire services pressure boosting.

Dynaflo HS

 Dynaflo HS
with Torrium2

Dynaflo HS

For applications requiring higher pressure with quiet and reliable operation, the Dynaflo HS Series offers the proven advantages of Davey quality coupled with Davey innovation.

Available in four stage models with pressures up to 50 metres and flows up to 110 lpm, the Dynaflo HS models are ideal for a wide range of applications including:

- High tank filling
- Sprinkler system supply
- Mains boosting (subject to local regulations)
- Industrial water supply
- Home pressure systems

Spearpoint Pumps

XJ70

XJ Series

Economical, compact 50, 70 and 90 lpm single stage jet assisted centrifugal pumps.

- Ideal for domestic irrigation from shallow wells or sand spears
- Overhead or high tank filling
- Pressure boosting
- Water transfer

PUMP

Single stage jet assisted centrifugal with closed vane impeller.
Brass pump shaft sleeve.
Mechanical shaft seal.

MOTOR

Davey manufactured
2 pole, 2850rpm, 50Hz
TEFC with IP55 enclosure
Class F insulation
Permanently split capacitor design
Double contact sealed C3-HTG rated ball bearings
Protected against both high operating temperatures and high current by a built-in automatically resetting thermal overload
All models supplied with 2m long power lead fitted with Australian 3 pin plug

- Manufactured from highest quality corrosion resistant materials
- Compact foot print for quick and easy installation
- TEFC motor - corrosion resistant and excludes dust and dirt
- Motor and pump designed for frequent starts
- Every unit individually tested to guarantee reliable operation
- Low maintenance
- Easy to service if required
- Reliable and proven performance

XJ HYDRAULIC PERFORMANCE

Firefighter Pumps

No.1 in Australia.

With an option to suit any application the performance of Davey's Firefighter range is driven by a number of patented features:

- Unique clamped impeller design provides smoother waterways for increased performance and suction ability, as well as easy servicing to clear occasional impeller blockages
- Independently floating neck rings to ensure optimal performance is maintained even after long periods of use
- Thrust balance drum and equalisation holes in the impeller reduce thrust forces to extend engine and seal life

Our range has an option to suit any application including firefighting, boom spraying, sheep jetting, deep well applications using a jet pump and general water transfer.

- Single and twin stage models for higher and lower performance needs
- Honda or Briggs & Stratton petrol and Yanmar diesel engine options
- Hand (recoil) and electric start
- Viton seals as an option for extended life in spraying applications
- Choice of suction sizes (1.5" and 2")
- Bayonet style priming and drain ports for fast and easy access
- A choice of engine and auto controls available for all diesel models

All Davey spark ignition (petrol) engines in this guide meet the proposed Australian Emissions Standards as well as the existing European and US emissions regulations.

DAVEY Firefighter

Single & Twin Stage Firefighter Models

4 way discharge = 2 x 1½" and 2 x 1" outlets

3 way discharge = 1 x 2" and 2 x 1" outlets

All threads are BSP

All petrol models feature low oil level protection as standard

All electric start models do not include battery or leads

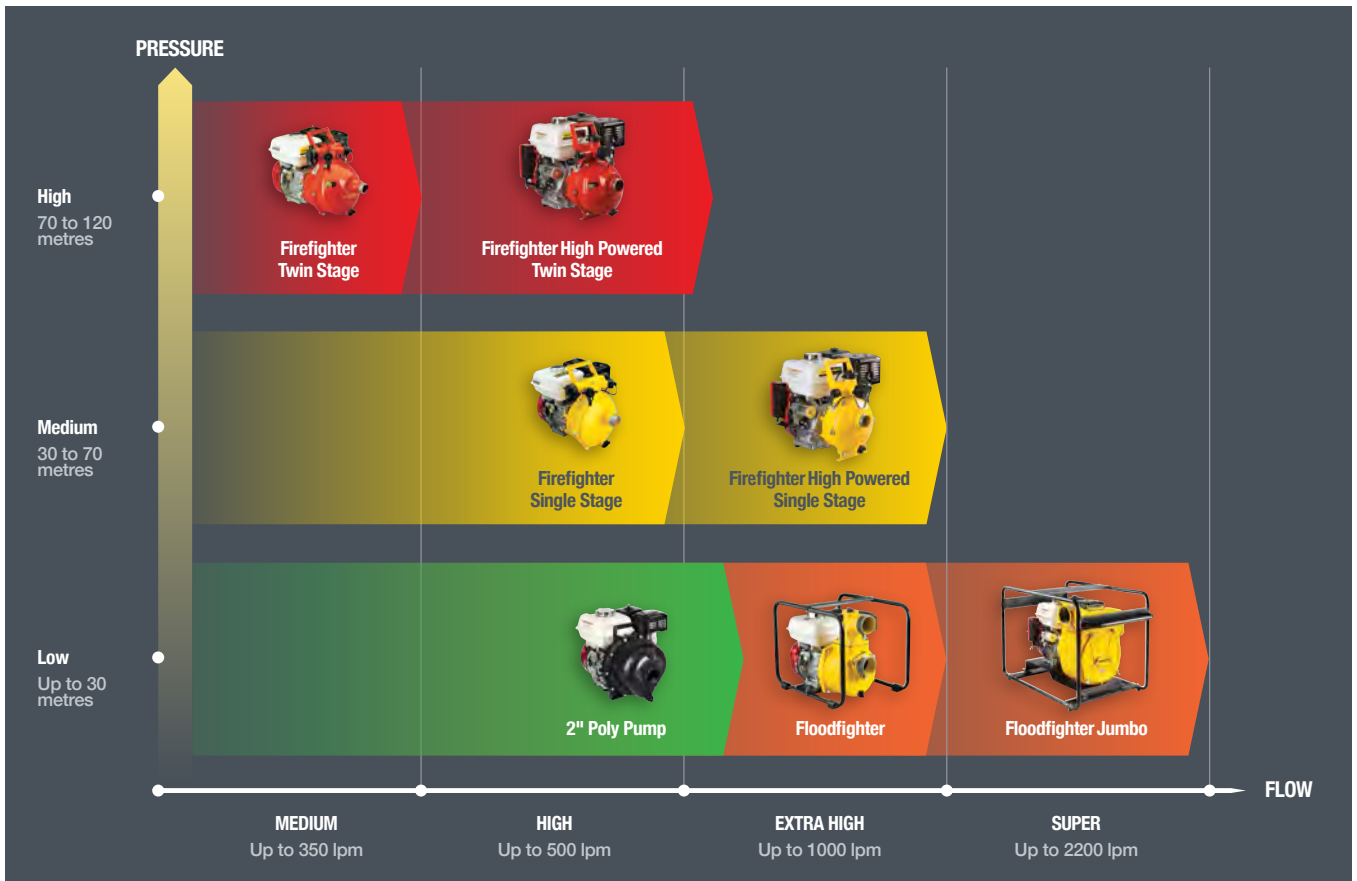

5155H with Honda GX160 Engine

5255H with Honda GX160 Engine

5150P Bare Shaft Single Stage

5250P Bare Shaft Twin Stage

Davey Engine Driven Pump Selection Guide

Firefighter Pumps

DAVEY

Single Stage Models

Single Stage models provide the versatility of high flow rates with strong pressure.

Twin Stage Models

Twin Stage models provide greater pressure which enables them to throw water further so you can stand further away when fighting a fire.

Superior Suction Lift

Excellent suction lift capability with the ability to self prime from 6 metres (5 metres on diesel models) for more versatile installation options.

Discharge Port Options

Choice of 3 or 4 way discharge port (dependent upon Firefighter model chosen) for easy installation with a choice of pipe sizes.

Improved Pump Efficiency

Patented floating castellated impeller neckrings front and back provide improved pumping efficiency, especially with gritty water, extended seal life and dramatically reduced engine wear.

Reduced Engine Wear

Trust balanced impeller design reduces axial loads on the engine for extended engine life.

Excellent Corrosion Resistance

Pump casing, diffusers and impellers are manufactured from quality corrosion resistant grade aluminium with polyester coated pump casing interior for added corrosion resistance.

Large Priming and Drain Ports

For easy case priming and draining after use the priming and drain plugs are a quick release bayonet design where no tools are required. They incorporate a safety release mechanism to avoid releasing them when the pump is pressurised.

Easy Maintenance

Heavy duty wide vane impeller for longer life, improved performance and easier cleaning in the case of a blockage.

Herbicide/Insecticide Spraying

"V" models come with Viton seal, orings, gaskets and caps fitted for improved chemical resistance. Please seek specialist advice from your chemical supplier if pumping chemicals. Use of aggressive chemicals may void warranty.

Quality Engines

Davey Firefighter pumps come fitted with quality Honda, Briggs & Stratton petrol engines or Yanmar diesel engines.

Hand or Electric Start

Firefighters are available in hand (recoil) or electric start models. All electric start models (12V, 30Amp hour battery and leads required) come fitted with hand start mechanism so they can be started in the case of a flat battery.

Low Oil Protection

All petrol models have low oil protection. The engine will not start or run if the oil level is inadequate.

4" Submersible Borehole Pumps

DAVEY

Slimline submersible borehole pumps suitable for 4" or larger boreholes. Manufactured from corrosion and abrasion resistant materials. Close coupled to a Davey submersible electric motor.

Applications include domestic water supply, turf watering, irrigation, stock watering and dewatering.

Features

- Precision stainless steel outer (2mm thick)
- Stainless steel thrust rings, lead guard and suction screen
- Standard 2 pole speed motor (2850 rpm)
- Abrasive resistant internal shaft bearings
- Cast stainless steel discharge head with in-built check valve

Benefits

- Proven and reliable design for arduous conditions
- Standard speed operation for long life
- Manufactured from high quality corrosion resistant materials.
- Teflon impregnated polyester staging, in models up to 60 lpm, allows the J Series to handle low yielding bores and sandy well conditions
- 25, 40 & 60 lpm models feature independently floating centrifugal impellers to provide easy starting and trouble free long life, automatically adjusting to the pumping conditions of each application
- 80, 110, 160 & 250 lpm models feature locked stack partial mixed flow polycarbonate impellers with open waterways to provide trouble free starting and longer operating life

6" Submersible Borehole Pumps

DAVEY

Advanced, laser welding, stainless steel manufacturing technology results in state of the art 6" submersible borehole pumps.

Close coupled to NEMA standard submersible electric motors, they are designed for flow rates up to 80m³/hr (1333lpm) form standard 6" bores.

Ideal for rural and industrial water supply, turf watering, agricultural irrigation, mine dewatering and firefighting systems.

- Manufactured from corrosion and abrasion resistant 304 stainless steel for a longer pump life
- High efficiency impeller design with radial flow impellers for 19 and 30m³/hr models and axial flow impellers for 46 & 65m³/hr models for increased performance
- Excellent sand handling capacity at 100g/m³ for improved performance and reduced pump wear in sandy bores
- Pump can operate continuously both vertically and horizontally
- Stainless steel impeller neck ring and floating Teflon neck ring allows abrasive handling and wear resistance
- Up-thrust bearing located at the bottom of the pump to reduce the risk of dry running failing to lubricate the bearing appropriately
- Upper journal sleeve made of tungsten-carbide to increase wear resistance

Specifications

- Capacities up to 80m³/hr
- Heads to 210m
- Coupling with NEMA standard motors
- Water temperature up to 50°C
- Maximum sand handling 100g/m³

Rewindable Motors

4" Rewindable Motors (suit 6" pumps with adaptor)

| Motor kW (P ₂) | Davey Rewindable Motor Only | Davey Encapsulated Motor Only |

6" Rewindable Motors

- Rewindable (DM) motors to suit 6" borehole pumps
- Sturdy construction with 304 stainless steel casing and internals with a 316 stainless steel upper bracket for excellent corrosion resistance
- Comes standard with a hard face mechanical seal (SiC/Al) for increased motor life
- Oversized compensation diaphragm to handle the heating a cooling cycles of the motor for greater reliability
- Sand slinger protection to help inhibit sand from entering the motor for increased reliability
- Removable cable connector for easy maintenance
- Horizontal mounting is permissible up to 15kW
- 6" NEMA standard coupling dimensions for easy assembly to all 6" borehole pumps

SS65 Series PERFORMANCE

Vertical Multistage Pumps

DAVEY

The VM Series offers a full range of vertical multistage centrifugal pumps with all stainless steel hydraulic parts. The 56 models provide flow rates from 0.4m³/hr to 80m³/hr and pressures up to 230 metres to suit a full range of domestic, farm and industrial applications. Standard range is 50Hz. 60Hz models available, made to order.

Vertical Multistage pumps are useful for a range of applications including agriculture and farming, turf watering and irrigation, pressure boosting, water supply – domestic, rural and industrial, commercial – high pressure washing and water treatment, boiler feed and jacking pumps.

Tested in compliance with
AS/NZS 4020
for use in contact with safe drinking water

All Stainless Steel Pump Ends

All hydraulic parts are made from 304SS with the shafts being made from 316SS to provide higher corrosion and abrasion resistance for a longer pump life.

Stainless Steel Companion Flanges

Threaded 304SS companion flanges with gaskets, nuts, bolts and washers are included with every pump for easier installation.

Mechanical Seals

Hard face mechanical seals provide a longer life. VM16 models and above feature cartridge seals for faster changeover.

MEPS Compliant

All 3 phase motors are MEPS (Minimum Energy Performance Standards) compliant meaning greater energy efficiencies and reduced running costs.

Rotating Elements

Replacing all moving hydraulic parts as a single unit ensures minimal maintenance downtime.

Teflon Neck Rings

Provide reduced vibration, noise and sensitivity to thermal expansion, maintaining high efficiency.

Raised Bottom Bearings

Raising this bearing reduces the risk of damage from sediments, increasing bearing life.

High Temperature

Pumps can operate in temperatures from -15°C to +70°C.

High IP Rating

VM motors are IP55 compliant and are suitable for outdoor applications.

Large Single Phase Motors

Available up to 4.0kW

VM32 PERFORMANCE

VM65 PERFORMANCE

VM90 PERFORMANCE

Packaged Pump Sets

Packaged Pump Sets are useful for a range of applications including household and commercial applications, turf watering, irrigation and stock watering, water supply, boosting and transfer and water treatment.

Davey offer a choice of both fixed speed and variable speed in simple pump through to six pump systems.

VM & RVM Pump Sets

VM and RVM pump sets are a single pump, packaged system, that is available in two versions.

VM Water Pressure System

VM

Automatic water pressure system (WPS) controlled by a pressure switch.

The VM-WPS configuration consists of a single VM vertical multistage pump, 18 litre or 100 litre pressure tank, adjustable pressure switch, liquid filled pressure gauge and isolating valve, all mounted on a common galvanised steel base with the exception of the 100 litre pressure tank, which is free standing.

RVM with Loss-of-Prime protection

RVM

Loss-of-prime control box to protect the pump in no flow situations.

The RVM models include a flow switch and loss-of-prime control box which protects the pump in no-flow conditions such as loss-of-prime and dead head. The loss-of-prime control box allows the user to start the pump in auto or manual mode. After running for 2.5 minutes in manual mode the control box automatically switches over to auto mode. The control box includes both visual and audible alarms.

- Flow rates from 1.2m³/hr to 22m³/hr
- Heads from 50m to 120m
- Maximum ambient temperature +40°C
- Maximum liquid temperature +70°C

- Single phase VM pumps up to 4.0kW
- Three phase VM pumps up to 7.5kW
- Soft starter option available with 5.5kW and 7.5kW loss-of-prime control boxes

Variable Speed Pump Controllers

Variable frequency drives (VFD) are used to vary the speed of a pump and change its performance so that a constant pressure point can be maintained under varying demand conditions. For VFD applications for a single pump with single phase supply, the Monsoon 1V is ideal and for single pump with three phase supply, Davey have the Monsoon Compact.

VFD Cost Savings

A pump driven at a slower speed uses significantly less power thus reducing running costs. When flow drops to 80%, power consumption drops to 50%. When flow drops to 50%, power consumption drops to 13%. This means that if demand varies significantly the initial capital cost of the VFD can be recouped in about 12-18 months.

Monsoon 1V & Monsoon Compact Pump Sets

Monsoon 1V & Monsoon Compact single pump systems with variable speed drive either mounted on the common base or able to have the drive remote wall mounted (allowing the removal of the drive controls from possible environmental hazards).

The standard packaged pump set includes Davey VM pumps, Davey Supercell tank, Speedman controller, inlet and discharge manifolds, isolating and non-return valves for each pump, all mounted on a stainless steel base. Monsoon Compact is also available as pumps with drive or as a flat pack system for on site assembly.

Features & Benefits

- Provides constant pressure via VFD control for one pump up to a maximum of 110kW
- Simple operator adjustable controls, On-Off switch and dial adjustment of set point
- Rugged, compact design
- In-built system high and low pressure and no flow protection with adjustable delay timers to suit individual applications
- Automatic calculation of "no flow" condition
- Automatic adjustment of system protection with the change of set point
- LED display for pump operation, status and fault conditions.
- Remote start/stop operation
- Configurable output relays for external communications.

Packaged Pump Sets

Monsoon 2C & 6C Pump Sets

Monsoon 2C and 6C pump sets are multi-pump fixed speed systems using a common control system to provide progressive pump operation within set pressure parameters.

Monsoon 2C & 6C – Fixed Speed Cascading Control

The versatile Monsoon fixed speed cascading pump set controllers can operate up to six hydraulically similar pumps. Operating the pumps at a fixed speed and cascading them for higher flow rates is a lower capital cost solution, ideal where demand is reasonably stable.

The Monsoon packaged pump set gives the choice and flexibility of various, although hydraulically similar, pumps and control options to best suit your application. While most pump sets will use VM series vertical multistage pumps, these fixed speed systems can use HM, Dynaflo and even ISOspec pumps.

Packaged Pump Sets

The standard packaged pump set includes VM pumps, Supercell tank, Monsoon 2C and 6C controller, 304SS inlet and discharge manifolds, isolating and non-return valves for each pump, all mounted on a stainless steel base. The pump set is fully assembled, wired and tested before it leaves Davey's premises to ensure trouble free site commissioning and operation.

Monsoon 2C & 6C Controllers Features & Benefits

- Provides automatic fixed speed cascading control via electronic pressure sensing to ensure maximum operating efficiency
- Monsoon 2C controller controls up to 2 hydraulically similar pumps up to 55kW
- Monsoon 6C controller controls up to 6 hydraulically similar pumps up to 110kW
- All pumps operate on the same pressure points to maximise the performance of each pump
- Pumps can be automatically rotated to ensure equal operating hours for each pump to maximise pump life
- User programmable menus in plain English enable easy adjustment to suit any operation
- Adjustable parameters include cut-in and cut-out pressure, high and low pressure shut down with adjustable timer delays to eliminate cycling and pressure surges
- System status LCD display includes system pressure, calculated flow (instantaneous and totalised flows), hours run per pump, starts meter for each pump, system starts for the last hour
- System protection includes adjustable low and high pressure protection with adjustable timer delays
- Pumps can be operated in either manual or automatic mode
- System protection alarms and fault resets can be accessed on site via the display screen or via external telecommunications
- Controller can accommodate up to 8 additional programmable inputs and 4 configurable output relays

VM Series Triple
Pump Set
with Monsoon 6C
Controller

Monsoon 3V Pump Sets

Monsoon 3V pump sets are high quality entry level multi-pump variable speed systems using a common control system to provide progressive pump operation for constant pressure within set parameters. Standard models include cascading pump operation with lead pump VFD and lag pumps DOL up to 4kW and soft start at 5.5kW and 7.5kW.

Monsoon 3V Controller

Under conditions of varying flow demand, the Monsoon 3V, variable speed controller, can vary the speed of pumps to deliver constant pressure. With variable speed control, the cost savings resulting from running pumps at a slower speed when demand drops can be substantial, offsetting the higher initial capital cost.

Features & Benefits

- Provides fully automatic variable speed pump control and protection via electronic pressure sensing
- Able to maintain a constant pressure point in conditions of varying flow demand via the use of variable speed technology and electronic pressure sensing
- Standard models include cascading pump operation with a permanently set lead VFD pump and lag DOL pumps up to 4kW and soft start for 5.5 and 7.5kW lag pumps
- Can control up to 3 hydraulically similar pumps, maximum of 7.5kW each pump
- Optional full VFD operation on all pump models up to 7.5kW, featuring auto-rotation of lead pump, are also available
- Programmable, security access code protected, plain English menus enable quick and easy parameter adjustment to suit individual site conditions
- Adjustable parameters include set point pressure, cut-in pressure, pressure boosting parameters and delay timers
- System Status LCD display includes system pressure, calculated flow (instantaneous and totalised flows), hour run per pump, number of starts meter for each pump, system starts for the last hour
- System Protection includes adjustable high and low pressure shutdown settings with adjustable delay timers in order to protect pumps
- System Protection Alarms and fault resets can be accessed on site via the display screen, or via external communications
- Pipe-fill mode can be enabled for automatic slow filling of system in order to avoid water hammer and pipe damage
- Pumps can be operated in manual mode for system commissioning and fault finding
- 12 programmable inputs allow for external sensing functions, or remote control
- 4 programmable outputs to communicate with external sources such as telemetry and building management systems
- Soft starts pumps via VFD or soft starters for 5.5 and 7.5kW motors to avoid large in-rush currents
- Integrated RS485 Modbus communications is compatible with most SCADA systems

VM Series Dual
Pump Set
with Monsoon 6V
Controller

Monsoon 6V Pump Sets

Monsoon 6V pump sets are high quality fully featured multi-pump variable speed systems using a common control system to provide progressive pump operation for constant pressure within set parameters. Standard models include cascading pump operation with lead pump VFD and lag pumps DOL up to 4kW and soft start at 5.5kW and above.

Features include: Auto rotate, manual over-ride, multiple programmable inputs and outputs, full RS485 Modbus for most SCADA systems and many more features included as standard.

Packaged Pump Sets

The standard packaged pump set includes multiple VM series pumps, Monsoon 6V controller, SuperCell tank, 304SS inlet and discharge manifolds, isolating and non-return valves for each pump, all mounted on a stainless steel base. Although most pump sets will use VM vertical multistage pumps, other pumps, such as the ISOspec end suction pumps can be controlled by the Monsoon 6V controller.

The pump set is fully assembled, wired and tested before it leaves Davey's premises to ensure trouble free site commissioning and operation.

Monsoon 6V Controller Features & Benefits

- Provides automatic constant pressure control via variable speed technology by means of electronic pressure sensing
- Controls up to 6 hydraulically similar pumps of any type up to a maximum of 110kW plus a jockey pump for low flow applications
- Able to maintain a constant pressure point even in conditions of varying demand
- Available in VFD Cascading, VFD Lead Lag Auto-rotate and one VFD per pump configurations
- In the case of VFD failure the system automatically converts to a fixed speed system to maintain function
- Security access code protected, plain English, user programmable menu system enables easy parameter adjustment to suit any operation
- Adjustable parameters include cut-in and cut-out pressure, high and low pressure shut down with adjustable timer delays to eliminate cycling and pressure surges
- System status LCD display includes system pressure, calculated flow (instantaneous and total flows), hours run per pump, starts meter for each pump, system starts for the last hour and data log
- System protection includes adjustable low and high pressure protection with adjustable timer delays to protect pumps
- Pumps can be operated in either manual or automatic mode
- System protection alarms and fault resets can be accessed and reset either on site via the display screen, or via external telecommunications
- Controller can accommodate up to 12 additional programmable inputs and 4 configurable output relays

End Suction Pumps

CS Series

- Davey CS Series are a 304 pressed stainless design, close coupled to a standard frame and mounted on a stainless base
- Ideal for clean water applications up to 110 °C with heads to 58 metres and flow rates up to 70m³/hr
- The back pull out design allows for easy servicing without the need to disconnect pipework
- All pumps include stainless steel screwed counter flanges with gaskets, bolts and washers
- Single phase motors up to 2.2kW are 240V and incorporate thermal overload

GUARANTEE
1 Year

ISOspec

ISOspec end-suction centrifugal pumps have been designed to international standard ISO2858 ensuring a sturdy and reliable, long lasting high performing pump suitable for a wide range of pumping applications. ISOspec pumps are dimensionally and operationally interchangeable with other similar pumps that conform to this standard.

ISOspec pumps are useful for a range of applications such as rural irrigation including centre pivot and travelling irrigators, dairy wash down, municipal and industrial water supply, commercial heating and air conditioning, pressure boosting, fire services, commercial pools and also commercial fountains and water features.

Long Coupled ISOspec CF Pumps

- Davey offers ISOspec CF bareshaft pumps long coupled to an electric motor using spacer coupling
- Allows for pump maintenance and removal of rotating components without the time consuming task of removing and refitting pipe connections or motor re-alignment
- Available as painted steel base and guard, galvanised base and guard and with condensation trays

ISOspec

Pump Casing

The pump casing is constructed of cast iron and rated to a maximum pressure of 1600 kPa (16bar). Flanges are drilled to Table E (Australian Standard AS2129). 316 stainless steel casings are available upon request.

LG2 Bronze Impeller

LG2 (potable grade) bronze impellers are fitted as standard. LG2 bronze provides high tensile strength, corrosion resistance and wear resistance for a longer life. 316 stainless steel impellers are available upon request.

ISOspec impellers are a closed vane design with balance holes to maximise hydraulic performance and efficiency.

Impeller diameters can be trimmed in 1mm increments to suit specified performance characteristics.

Enlarged Shaft

Heavy duty enlarged shaft reduces deflections at high speeds. Shafts come standard in heavy duty 420 stainless steel. 316 stainless steel shafts are optional.

Mechanical Seal

ISOspec pumps come standard with a high quality John Crane 2100 Series mechanical seal with carbon vs ceramic hard faces. Silicone carbide vs silicone carbide hard face seals are available on request.

Seal operating temperatures are as follows:

- Standard Carbon/Carbon/Nitrile seal – 60°C
- Standard Carbon/Carbon/Nitrile seal with seal flushing kit – 80°C
- Optional hard face Silicon Carbide/Silicon Carbide/Viton seal – 60°C
- Optional hard face Silicon Carbide/Silicon Carbide/Viton seal with seal flushing kit – 110°C

Variable Speed Options

Davey Monsoon controllers, including the NEW Monsoon Compact, can be supplied with Davey CS model pumps as both single pumps and for multiple unit pumpsets - POA

Bronze Wear Rings

Replaceable front and back LG2 (potable grade) bronze wear rings allow impeller clearances to be maintained to ensure optimum pump performance and full bearing life.

Casing Orings

High quality reusable Nitrile orings are used for ease of reassembly.

MEPS Compliant

All motors are MEPS (Minimum Energy Performance Standards) compliant, meeting minimum energy efficiency standards as mandated in Australian Standard AS/NZS1359.5.2000.

Bearings

The robust / heavy duty bearing housing is manufactured in high strength cast iron providing trouble free operation.

Bearing Housing

ISOspec use heavy duty SKF greased-for-life bearings to reduce maintenance. Re-greaseable bearings are available on some models.

Back Pull-out Design

Back pull-out design allows for easy removal of rotating element without disturbing the pipe work, lagging, motor or pump volute casing. This is proven to reduce downtime whilst performing routine maintenance.

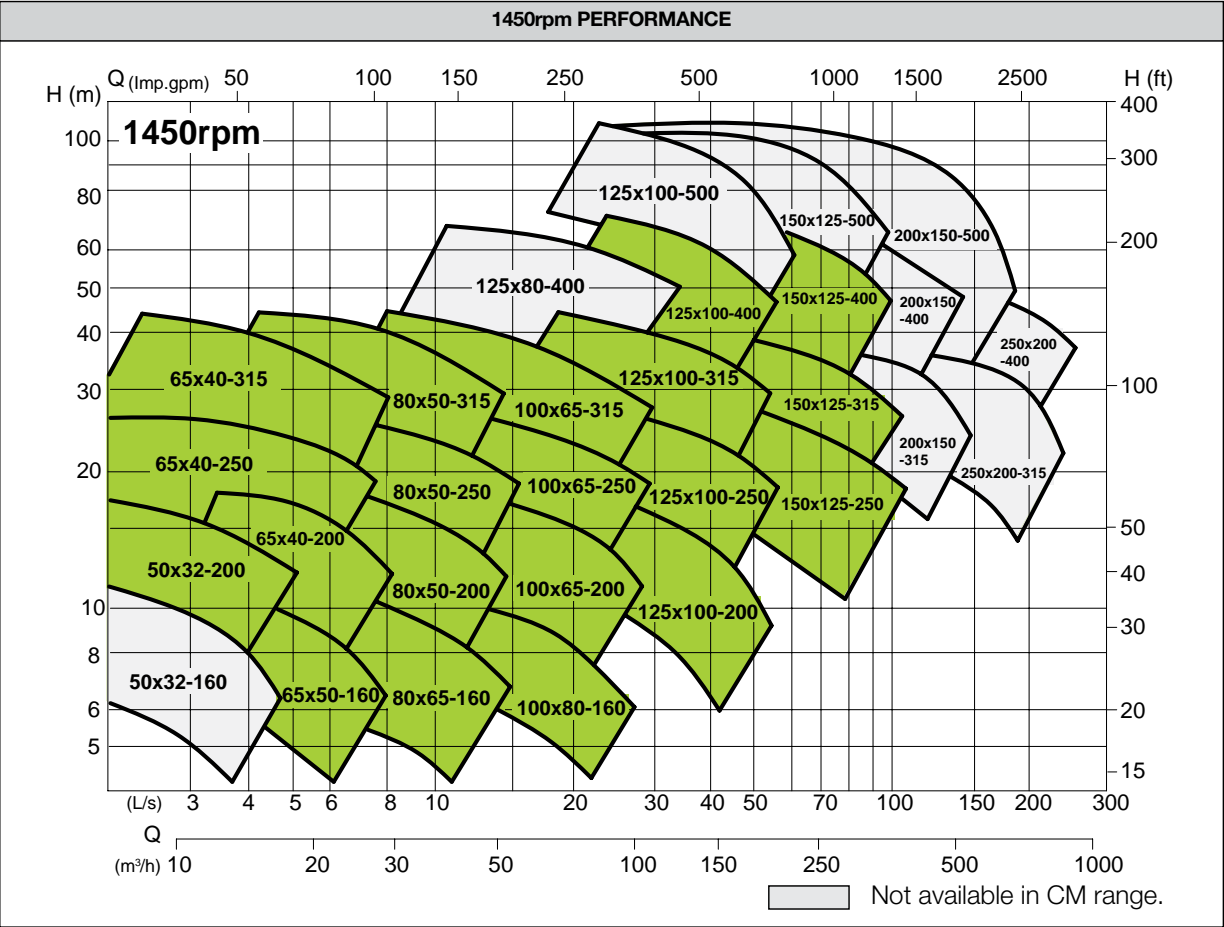

Tappings

Convenient suction & discharge pressure gauge tappings plus a volute drain are fitted as standard to all ISOspec pumps.

End Suction Pumps

ISOspec

CF and CM Ranges

An ISOspec CF pump can be coupled to a diesel engine for applications where no electricity supply is available, or where non-electric back-up is required. Davey diesel pump sets come fully assembled with CF pump, diesel engine and a standard control panel, all mounted on a sturdy steel base.

Applications

- Irrigation
- Frost Control
- Water Supply
- Dewatering
- Fire Services

Diesel Engines

Diesel irrigation packs come with a choice of Yanmar diesel engines for power ratings between 8kW and 56kW, or JCB diesel engines for higher power requirements between 55kW and 102kW.

Yanmar Engine Protection/Control Panels

EC150 Engine Protection Controller (TNV / JCB Engines)

- Manual key start control panel with electronic tachometer
- "E" stop button
- Engine protection on the following conditions:
 - > Low oil pressure
 - > High water temperature
 - > Low radiator level
 - > Fan belt breakage
 - > Over-speed / under-speed
- Includes, start key, 99hr countdown timer, hour meter, first out indicator & battery voltage indicator
- 1 x spare input (e.g. float switch)
- Weatherproof cabinet with Deutsch connector

ACP200 Automatic Control/Protection Controller (TNV / JCB Engines)

- Designed for fully automatic 24/7 start and stop control of the engine
- 7 day programmable timer for complete control
- Engine protection as per the EC150 control panel
- Two wire voltage free contact of start/stop operation
- Weatherproof cabinet with Deutsch connector

K45 Electronic Engine Control/Protection Controller – JCB Electronic Engines

Ideally matched to the larger JCB models which have full electronic engine management systems, the K45 controller provides top level engine protection. While manual starting is a standard feature, the K45 has the ability to accept operational inputs from float, pressure or flow switches, pressure transducers, irrigation controllers, BMS, computers etc. The controller has inbuilt time-clock control as well as the ability to allow for constant pressure operation. The addition of SMS start / stop is also possible as an added option.

Heavy Duty Steel Base

Diesel irrigation packs come complete, mounted on a purpose built, heavy duty steel skid base allowing easy on site installation.

Water Cooled Diesel Pump Sets

| Manuf. | Model/ Part no. | Description | Cylinders | Maximum Continuous Power (kW) | Maximum Continuous Power (hp) | Minimum Speed (rpm) | Maximum Speed (rpm) | Fuel Cons. @ 2200rpm approx. l/hr (100% load) |

Wastewater Pumps

Davey offers a wide selection of submersible Sump Pump models to suit commercial, rural and domestic applications. Davey Sump Pumps are tough suckers, with robust designs for long service life.

Davey offers a range of controls to make installation easier. Automatic float switches are available on models up to 750w single phase. Selected single phase models are also available as manual switched models. Manual switched models can be fitted with a variety of control systems, including multiple pump controllers.

✗ Not Recommended

SumpMaster Dual Sump Pump Controller for Float Switch Only Operation

Features include:

- System status via Pilot Light & display including pump run and fault indication lights
- IP65 enclosure
- Dual duty / duty standby operation
- Adjustable start & stop delays
- Automatic rotation of lead / duty pump to equalise hours run per pump
- Telemetry outputs for pump start/stop, system faults, pump status etc. (See full list)
- Options for additional pump protection and external communications. RS485 SCADA interface
- Low level and high level protection with selectable shutdown options
- Random starts selection to eliminate scum build-up within the supply tank

When water quality may be unsuitable for float switches, SumpMaster can be operated via submersible transducers.

High level alarms available also.

Entry level SumpMaster Mini now available.

D42A/B

D53A/B

Multistage Submersible Pumps

Specially designed for rainwater through to final stage septic treatment pumping for subsoil drip systems. Able to pump grey water of neutral pH containing up to 1% small solids. Some wear should be expected while pumping hard solids in suspension.

PERFORMANCE – Rainwater Harvesting Models

Selected models available in 316SS.

DCS40M

Double Case Pumps

The double case design allows for safe operation in a partially submerged condition. DC10 models are able to pump clean or filtered grey water of neutral pH containing up to 10% of small soft organic solids (<10mm OD). Some accelerated wear should be expected while pumping hard solids in suspension.

Suitable for fish ponds or aquaculture.

DCS40 models and above are able to pump stormwater or 'grey water' of neutral pH containing up to 10% of small soft organic solids (<10mm OD). Some accelerated wear should be expected while pumping hard solids in suspension.

PERFORMANCE – Double Case Models

Wastewater Pumps

D42A/B

D53A/B

Selected models
available in 316SS.

Multistage Drainage Pumps

Specially designed for final stage septic treatment pumping for subsoil drip systems. Able to pump grey water of neutral pH containing up to 1% small solids. Some wear should be expected while pumping hard solids in suspension.

D15A

General Purpose Dewatering Pumps

Suitable for filtered stormwater or water transfer. Able to pump grey water of neutral pH containing up to 10% small soft solids or 1% fine solids. Some accelerated wear should be expected while pumping hard solids in suspension.

Selected models also available in 316SS.

D15VA

D15VAGMA

PERFORMANCE – General Purpose Dewatering Models

Multi-purpose Vortex Pumps

Ideal for pumping grey water, final stage septic water and for larger models even raw sewage with soft solids up to 80% of the pump discharge size.

Able to pump clean or 'grey water' of neutral pH containing up to 20% small soft solids or 1% fine solids. Some wear should be expected while pumping hard solids in suspension.

D15VAGMA model supplied with vertical float to suit more confined spaces.

PERFORMANCE – Vortex Models

D75SA

Single Channel Impeller Pumps

Able to pump semi-screened or 'grey water' of neutral pH containing up to 20% soft solids or 1% fine solids and raw sewage up to 80% of the pump outlet diameter. Some wear should be expected while pumping hard solids in suspension. Also available in 316 stainless steel for sea water applications.

DT22K

Cutter / Shredder Pumps

Able to pump semi-screened or 'grey water' of neutral pH containing up to 20% soft solids or 1% string like solids. Some wear should be expected while pumping hard solids in suspension.

Cutter pumps are not suitable for sanitary products – use Grinder models.

PERFORMANCE – Single Channel Impeller Models

PERFORMANCE – Cutter/Shredder Models

D120G

Grinder Pumps

Able to pump soft organic solids, sanitary products and even some textiles in suspension, by shredding to a slurry.

Slide Rail Kits

Davey Slide Rail Kits make installation and removal for servicing easier. These kits are available to suit Vortex, Single Channel, Cutter and Grinder models only. The rail kits allow simple connection or disconnection to permanent pipework in the pit or well. A slide rail system is highly recommended in commercial, grey water or black water installations as it can save time and overcome some OH&S concerns during routine maintenance.

PERFORMANCE – Grinder Models

Wastewater Pumps

KZN

Sludge / Slurry Pumps

Able to pump water containing solids in suspension, up to 70% by weight. Some wear should be expected with hard solid pumping. Not suitable for explosive or flammable materials or fluids.

PERFORMANCE – Sludge / Slurry Models

Vertical or horizontal installation

Davey's Dynapond Pond Pumps are specially designed for fully submerged operation, 24 hours a day, 7 days a week.

The Dynapond is ideal for large domestic, small commercial fountains, waterfalls, Koi (Japanese Carp) and fish ponds, as well as recirculation applications in freshwater aquaculture. Dynapond 8000 is suitable for sea water applications.

Dynapond models feature:

- Open impeller allowing the passage of small soft solids
- Adjustable inlet strainer holes (10mm or 5mm) to control what goes through the pump
- Oil free motor, so they are safe for fishponds
- Maximum submergence of up to 3 metres
- 1 1/4" BSP female outlet and discharge elbow for hose connection

HYDRAULIC PERFORMANCE

FLOW REQUIRED PER METRE WIDTH OF WATERFALL

| Depth of water at top of waterfall | FLOW | |
|------------------------------------|-------|--------|
| | (lpm) | (l/hr) |
| 5mm | 45 | 0.45 |
| 10mm | 100 | 0.78 |
| 15mm | 200 | 0.58 |
| 20mm | 300 | 0.80 |

Model FNT

Model FNS

Circulator Pumps

Davey circulator pumps are ideal for domestic heating applications, secondary hot water services, air conditioning or cooling systems.

The advanced multi-speed, canned motor, provides long, reliable operating life. The pump has a maximum operating temperature of 120°C and a maximum service pressure of 1000 kPa.

To make it easier to install, Davey offers five different sizes, as well as including the unions and gaskets with each pump.

Selecting the Right Pump for the Job

Your Davey Dealer is a water specialist with staff trained in the principles of pump operation and pump selection. When you visit your Davey Dealer seeking advice on a pump or water supply system, it will assist if you have taken a few minutes to gather some basic information on your requirements.

Fill in the answers to the questions below in the spaces provided (tick boxes as appropriate).

1 For what purposes do you require a water pump?

- ☐ Household water pressure
- ☐ Garden watering/sprinklers
- ☐ Irrigation
- ☐ Stock water supply
- ☐ Hosing down
- ☐ Tank filling
- ☐ Firefighting
- ☐ Other (specify)

1a Operating pressure required (if known)kPa

**2 Total output required (if known)L/min OR
Total no. of taps to be serviced at one time:.....**

3 From what source of supply is the water to be drawn?

- ☐ River, creek, channel
- ☐ Dam
- ☐ Rainwater tank (above ground)
- ☐ Underground tank
- ☐ Bore
- ☐ Spear point
- ☐ Other (specify).....

3a Water supply: clean, muddy or gritty?

.....

3b If bore, state inside diameter of casing

Also depth.....m.

**3c If water is to be drawn from bore, state
quantity of water bore will deliver.....L/min**

From what constant depth?.....m

What is the standing water level in the bore?.....m

**4 Vertical suction lift from water supply level
to the pump site?.....m**

**5 Pipe length to be run on suction side of pump
from applications other than a bore**

**6 Diameter of suction pipe, if already laid.....mm
and type of pipe e.g. polythene, galvanised iron,
PVC, other (specify).....**

**7 Vertical height from pump to highest point
of delivery**

**8 Pipe length to be run on delivery side
of pump**

**9 Diameter of delivery pipe, if already laid.....mm
and type of pipe e.g. polythene, galvanised iron,
PVC, other (specify).....**

10 Type of pump required:

- ☐ Automatic pressure system
- ☐ Petrol Engine Driven pump
- ☐ Manual Electric Pump
- ☐ Diesel Engine Driven Pump
- ☐ Other (specify)

11 If electric pump, voltage of electricity supply is:

- 1 phase – ☐ 240 volt OR ☐ 480 volt
- 3 phase – ☐ 415 volt
- ☐ Other, please specify.....

Useful Pumping Information

Common Average Water Requirements

The average water requirements, shown below, may vary due to specific application concerns. Water requirements should be supplied within acceptable daily running times. This time will vary according to the nature of the application.

| | |
|---|------------------------------------|
| SHOWER: 8lpm at 140kPa (20psi) | CATTLE: 30-55 litres/day |
| LAWN SPRINKLER: 15lpm at 140kPa (20psi) | MILKING COWS: 70 litres/day |
| 1/2" TAP: 12-15lpm at 140kPa (20psi) | SHEEP: 5-10 litres/day |
| 3/4" HOSE & 1/4" NOZZLE: 40lpm at 210kPa (30psi) | PIGS: 10 litres/day |
| 1" HOSE & 3/8" NOZZLE: 75lpm at 210kPa (30psi) | HORSES: 55-60 litres/day |
| 100 CHICKENS: 25 litres/day | |

Suction Lift

Pumps do not actually suck; rather, pumps create a partial vacuum into which atmospheric pressure pushes water via the suction pipework.

There are a number of factors which affect suction lift:

- **Altitude:** As altitude increases, atmospheric pressure decreases, thus exerting less "push" on the water entering the pump suction
- **Pump Suction Performance:** Generally, the higher the flow rate from a pump, the less the partial vacuum created by that pump
- **Water Temperature:** The higher the water temperature, the more likely it is to boil when exposed to a partial vacuum, thus reducing suction lift
- **Friction Loss:** Friction loss in the suction pipe reduces the vertical lift possible

In practical terms, a maximum suction lift of 6.7 metres at sea level is common, but all of the items above will reduce this figure.

Pump performance tables and the tables attached are a good guide. Your Davey Dealer can assist with assessment of suction lifts.

| Elevation | Maximum Practical Suction Lift | Absolute Atmospheric Pressure (cold water) |
|-----------|--------------------------------|--|
| Sea Level | 6.7m | 10.35m |
| 500m | 6.1m | 9.35m |
| 750m | 5.8m | 9.46m |
| 1000m | 5.5m | 9.19m |
| 1500m | 5.0m | 8.64m |
| 2000m | 4.5m | 8.13m |

| Calculating Suction Lift | |
|---|--|
| $H_s = P_a - NPSHR - P_{vap} - \text{Safety}$ | |
| H_s | Maximum suction lift including friction loss in suction pipe |
| P_a | Absolute atmospheric pressure at site |
| NPSHR | NPSH required by pump at specific flow rate |
| P_{vap} | Vapour pressure of liquid with specific temperature |
| Safety | Allow at least a 1m safety factor |

| Water Temperature (°C) | Suction Lift Reduction (metres) |
|------------------------|---------------------------------|
| 15 | 0 |
| 20 | 0.06 |
| 30 | 0.22 |
| 40 | 0.52 |
| 50 | 0.98 |
| 60 | 1.73 |
| 70 | 2.85 |
| 80 | 4.51 |

| Calculating Pump Power | |
|---|--|
| Water Power (kW) = Flow (lpm) x Head (m) / 6122.4 | |
| Pump Power (P_p, kW) = Water Power / Pump Efficiency % | |
| Input Power (P_i, kW) = Pump Power / Motor Efficiency % | |

Variable Speed Performance

Changing the speed of a pump changes the flow and pressure output of the pump as well as the power required by the pump to deliver the new duty point.

- Flow (Q) changes directly proportional to speed (N) change
- Head / pressure (H) changes proportional to speed change squared
- Power (P) changes proportional to speed change cubed

| |
|---|
| $Q_1 / Q_2 = N_1 / N_2$ |
| $H_1 / H_2 = (N_1 / N_2)^2$ |
| $P_1 / P_2 = (N_1 / N_2)^3$ |
| $Q_1 / H_1 / P_1$ are current flow, head & power at speed N_1 |
| $Q_2 / H_2 / P_2$ are the new flow, head & power at speed N_2 |

Useful Conversions

| Flow Conversion | | | | |
|-----------------|------|-------|----------|------|
| lpm | lps | m³/hr | Imperial | |

| 39.37 | 3.2808 | 1.0936 | 1 |

Pipe Friction

Pipe friction is the resistance to flow caused by the pipe. As a general principle, it is better to use the largest practical pipe size to avoid losses in pump performance. Flow rates for which friction loss has not been calculated involve velocities which may cause water hammer.

| Friction Loss for Poly Pipe – 20mm to 63mm (m/100 metres of pipe) | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
|---|------|-------------------------------|-------|--------|--------|-------|---------------------------|-------|-------|-------|-------|------------------------------|-------|-------|-------|-------|------------------------------|-------|-------|-------|------|---------------------------|-------|-------|-------|------|-------|-------|-------|-------|
